

6. The Abyssinian Center

**-Sesame
(Gergilim)**
Sesamum indicum

**-Castor bean
(Mamona)**
Ricinus communis

**-Coffe
(Café)**
Coffea Arabica

-Durum wheat
Triticum durum

-Teff
Eragrostis abyssinica

**-Barley
(Cevada)**
Hordeum vulgare

**-Pea
(Ervilha)**
Pisum sativum

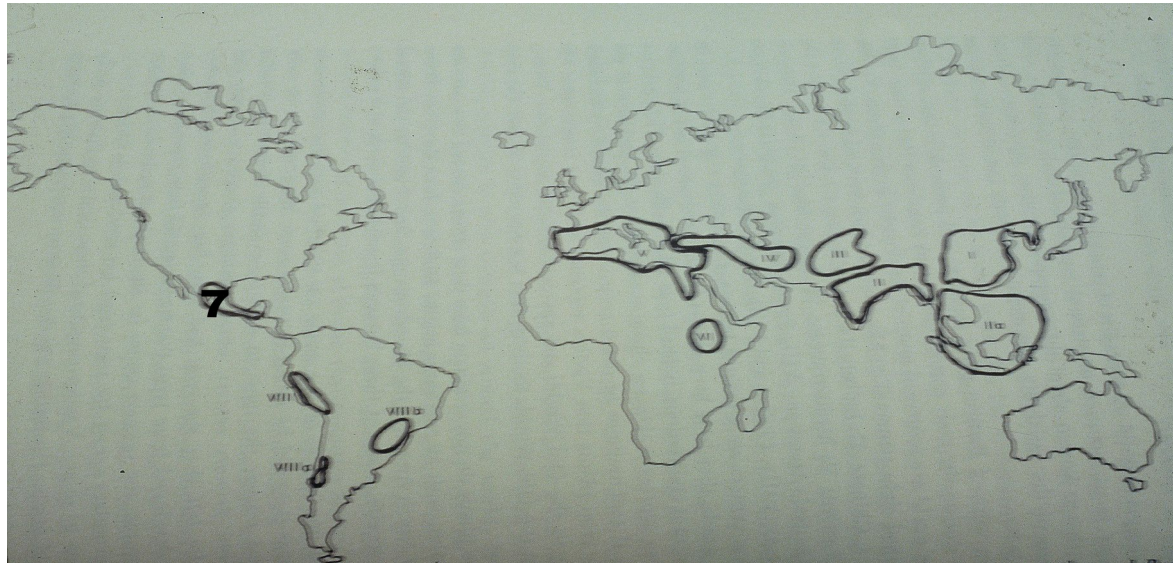

**-Chick pea
(Grão-de-Bico)**
Cicer arietinum

-Poulard wheat
Triticum turgidum

7. The South Mexican and Central American Center

**-Corn
(Milho)**
Zea mays

**-Upland cotton
(Algodão)**
Gossypium hirsutum

**-Common beans
(Vagem)**
Phaseolus vulgaris

**-Sisal hemp
*Agave sisalana***

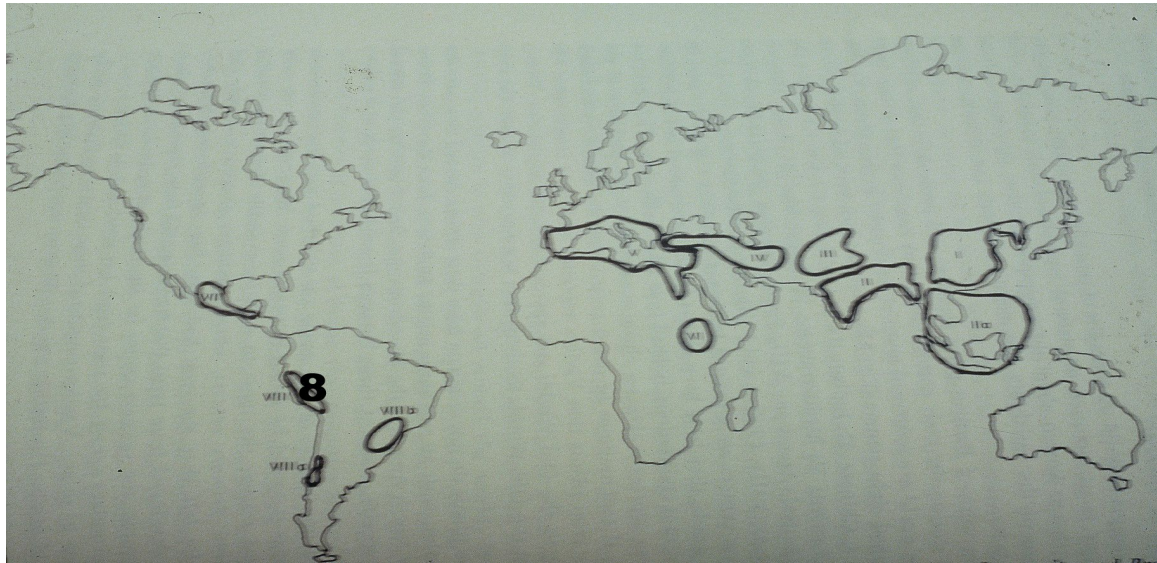

**-Pepper
(Pimenta)**
Capsicum annum

**-Squash
(Abóbora)**
Cucurbita spp.

8. South American (Peruvian-Ecuadorean-Bolivian) Center

**-Tobacco
(Fumo)**
Nicotiana tabacum

**-Sweet Potato
(Batata Doce)**
Ipomoea batatas

**-Tomato
(Tomate)**
Lycopersicon esculentum

**-Potato
(Batata)**
Solanum tuberosum

**-Sea Island Cotton
(Algodão)**
Gossypium barbadense

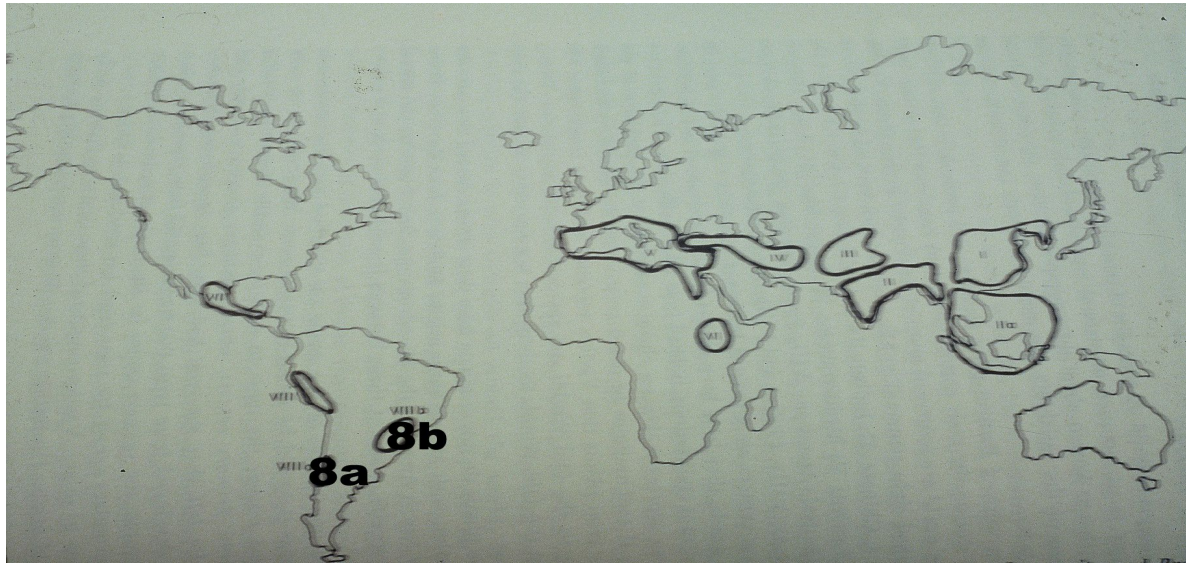

**-Lima bean
(Feijão Fava)**
Phaseolus lunatus

**-Papaya
(Mamão)**
Carica papaya

8a, 8b The Chiloe and the Brazilian-Paraguayan Center

**-Peannut
(Amendoim)**
Arachis hypogaea

**-Potato
(Batata)**
Solanum tubersum
(The Chiloe Center)

**-Rubber tree
(Seringueira)**
Hevea brasiliensis

**-Manioc
(Mandioca)**
Manihot esculenta

**-Pineapple
(Abacaxi)**
Ananas comosa

**-Cacao
(Cacau)**
Theobroma cacao

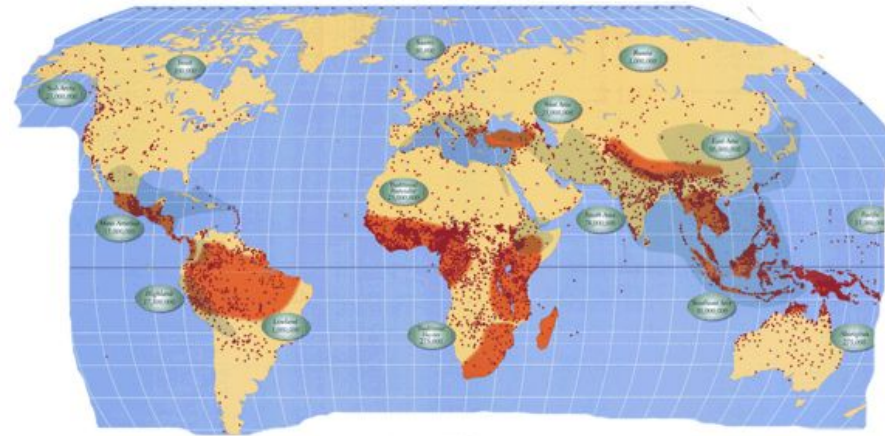

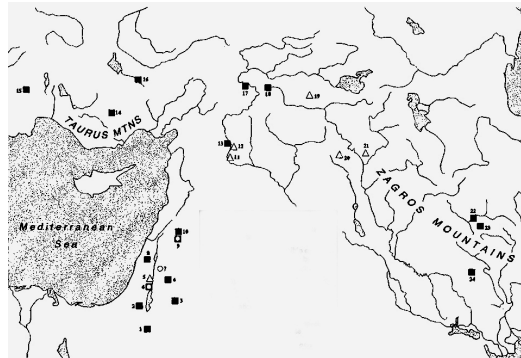

**-Purple granadilla
(Maracujá)**
Passiflora edulis

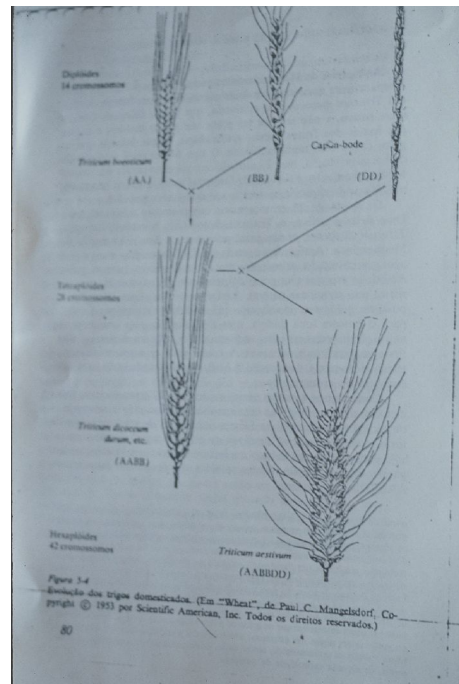

3.2 Vavilov Revised

Noncenters Concept (Harlan, 1971)

3.3 Dynamic of diversity

3.3.1 Hybridization

3.3.2 Topography and Population Fragmentation

3.3.3 Introgression

3.3.4 Polyploidy

Genetic Resources Conservation

1. Conservation *in situ*

2. Conservation *ex situ*

2.1 Living Collection

2.2 On-farm conservation

2.3 Seed Bank

2.4 Tissue culture

Genetic Resources Manipulation

1. Gene Transference by Interspecific Hybridization

1.1 Breaking interspecific barriers

A- Reciprocal crosses *Malus pumila* and *M. baccata*

Or *Manihot esculenta* x *M. glaziovii*

X

B- Environmental conditions

Prunus dulcis

x

Prunus persica

B- Environmental conditions

In cassava

X

In cassava

X

C- Mentor Effect

The case of manihot pohlii x cassava

D- The use of male steril cultivars as maternal

Figure 2. Micrographs showing pollen grains of male sterile and maternal lines of *Chrysanthemum* and their germination.

E- Gametic diversity

F- Embryo Culture

G- Bridge hybrid

H- Chromosome Duplication

Contin... Genetic Resources Manipulation

2. Interspecific Hybrids Polyploidization

a. Method

b. polyploid production

c. Chimera types

d. Detection of polyploidy

A tetrad with multiple nuclei.

A diad and a triad.

√ Origen of Agriculture

1. Domestication for religious reasons

2. Domestication due to change of climate (Childe)

- Crowded (Multidão)
- Distúrbio de Solo
- Revolução Neolítica
(Caçadores → plantadores)

3. Agriculture as a discovery (Sauer theory)

(Teoria difusionista)

- falta de alimentos;
- diversificação;
- inundação;
- stoliniferos;
- sedentária;
- difusão e superioridade;

4. Agriculture as an extension of gathering (Binford theory)

V† Classification of cultivated plants

a. Objectives and utilization of this type classification

b. Pattern of variation in cultivated plants

c. The Gene Pool system

The Gene Pool system is a model for understanding the genetic diversity of a population. It shows how genes and alleles are passed on from one generation to the next, and how they are influenced by the environment and other factors.

VII The Dynamic of Domestication

a. What means domesticate

b. Intermediate forms of domestication

- example of boabab, *Adansonia spp.*

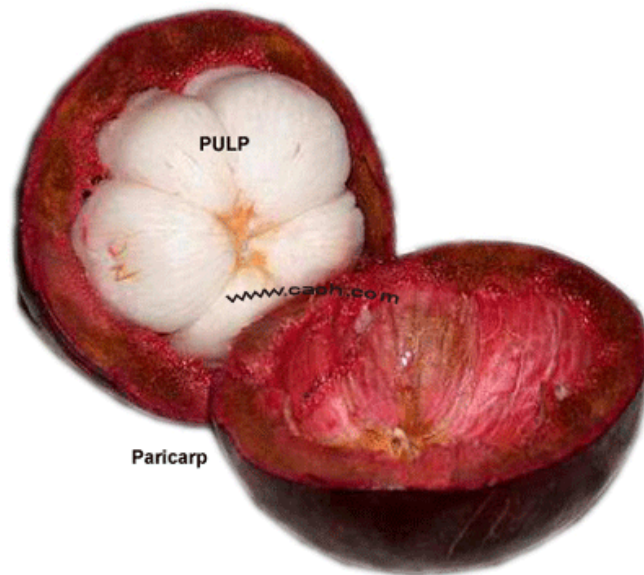

- *Acacia albida*

c. Modified characters by domestication

c.1. Dispersion

c. 2. Apical Dormency

c. 3. Sensibility to Fotoperiodism and Maturation Uniformity

c. 4. Increase of seed size

c. 5. Reduction of germination inhibitors

c. 6. Protein and Carbohydrate Content

d. Mechanisms of selection for domestication

d.1. Competition of seedlings

d.2. Interaction crop - weed

- **Patterns of variation in cultivated plants**

1. Causes of variation

- a. Time**
- b. Topography**
- c. Tribes**
- d. Introgression**

a. Time and mutations

b. Topographical Heterogeneity

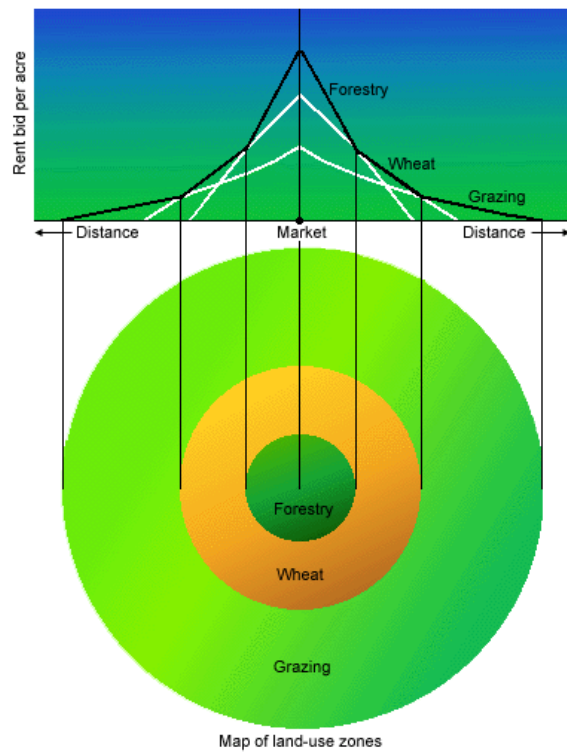

FIGURE 6-4: Hypothetical Rent Gradients and Land-Use Zones

c. Tribes diversity

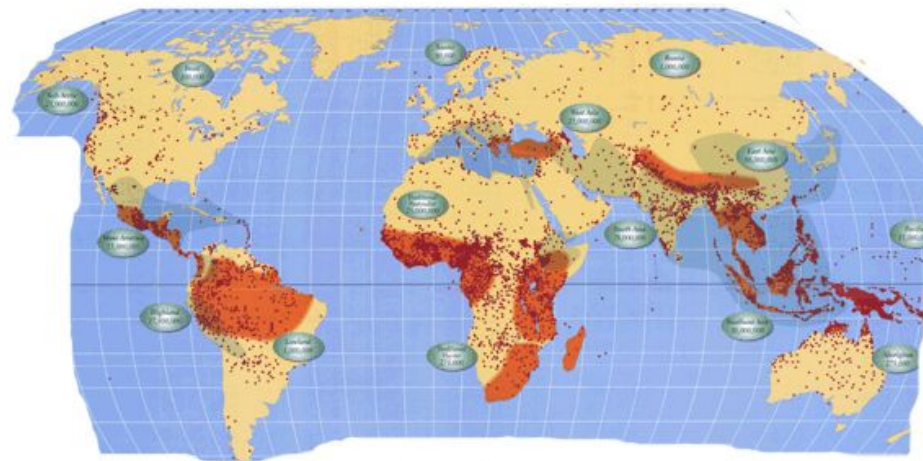

d. Introgression

2. Geographic pattern

- a. Endemic
- b. Semi endemic
- c. Monocentric
- d. Oligocentric
- e. Nonecentric

a. Endemic: *Brachiaria deflexa* – Guine(Africa)

b. Semi endemic: *Eragrostis tef* (India)

eragrostis tef (teff)
© 2004 pictured by antonie van den bos
for aycronto.com

**c. Monocentric: Café, and rubber tree
(Não há secundário)**

**d. Oligocentric – Aveia, trigo, lentilha, etc.
(Há muitos centros secundários)**

e. Nonecentric: Sorgo, banana

Drought Region Over Millet and Sorghum Regions
